Dear Dropbox Apprenticeship Hiring Team,

With the utmost eagerness, I want to express my interest & passion for the Engineering Apprentice role at Dropbox. As someone currently developing programming and design skills through various opportunities, I know my versatile skills and qualifications will make me an asset to the team.

As you will find on my resume, I have had various experiences with many different roles that shed light on my commitment to learning and improving. I am looking to take the next step in my career by leveraging my analytical mindset and early development skill set to maximize the user experience at your company.

My Coding Journey: Although I wanted to be a Black female Indiana Jones, I switched to event management in college, which carried over into my early career at Spectrum Catering & Events. Spectrum allowed me to flourish as a team-oriented leader, gaining unique problem-solving skills and tenacity to bring to the next premier event. However, I desired something more challenging that allowed more time with my family, as my partner's health declined after being diagnosed with MS. When I left Spectrum, I explored several routes before taking independent courses on front-end development and design as a side hobby. As a progressive African American cis woman (she/her), I started Studio Junk as a testament to the indirect social impact I wanted to put into the world by fusing it with my newborn love for code, pre-COVID. Because of this, my interest in programming has aligned me more with my values and given me the vision to see how software engineering, with a preference for front-end development, could be a potential career for me.

As a prospective apprentice, I immediately can bring the following qualities to the team:

Basic Knowledge In Development & Design: In my recent experience at the UT-Austin Full Stack Coding Bootcamp, I've collaborated with several students on group projects, focusing on developing a cryptocurrency app (Hold On For Dear Life Ape) and a social network for dog owners (Barkr). I've worked on several homework challenges highlighting the fundamentals of HTML, CSS, Javascript, OOP, MySQL, and much more. Also, I've gained design and development experience through managing and designing custom website projects with UI-driven web strategy and wireframing on Adobe XD as a freelancer.

People-Centric, Dedication, and Adaptability Skills: Throughout my experiences, I've invested in my team members to cultivate a sense of community, resulting in meaningful engagement and high-performance results. By doing so, I created more robust relationships with senior management to achieve their business goals. Additionally, I've worked on multiple projects at once and exceeded expectations in my roles.

While my resume provides a quick summary of my experiences, I hope to have the opportunity to share how I can bring value to your company's needs.

Best Regards,

Anjuli Garcia
